

From XAMPP website <https://www.apachefriends.org/index.html> download XAMPP

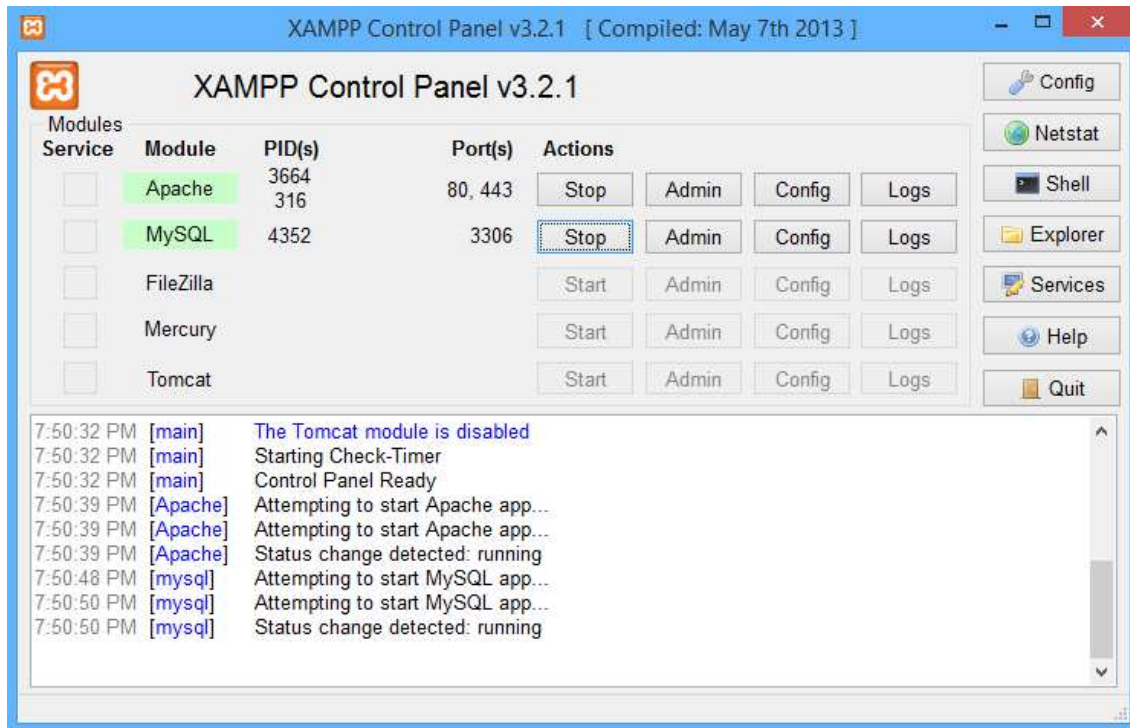

You can find the downloaded files in the download folder.

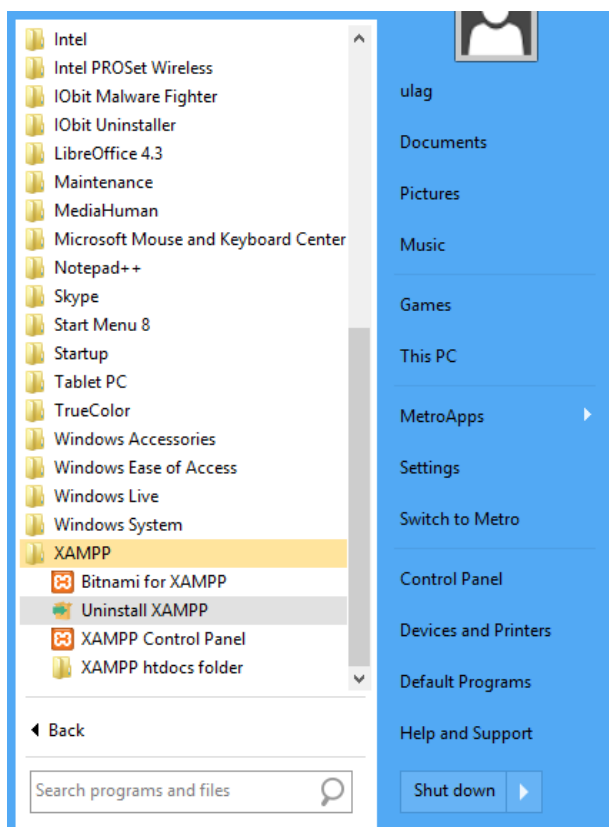

Install the program by clicking it. Select the only the components that are needed for chemoventory.

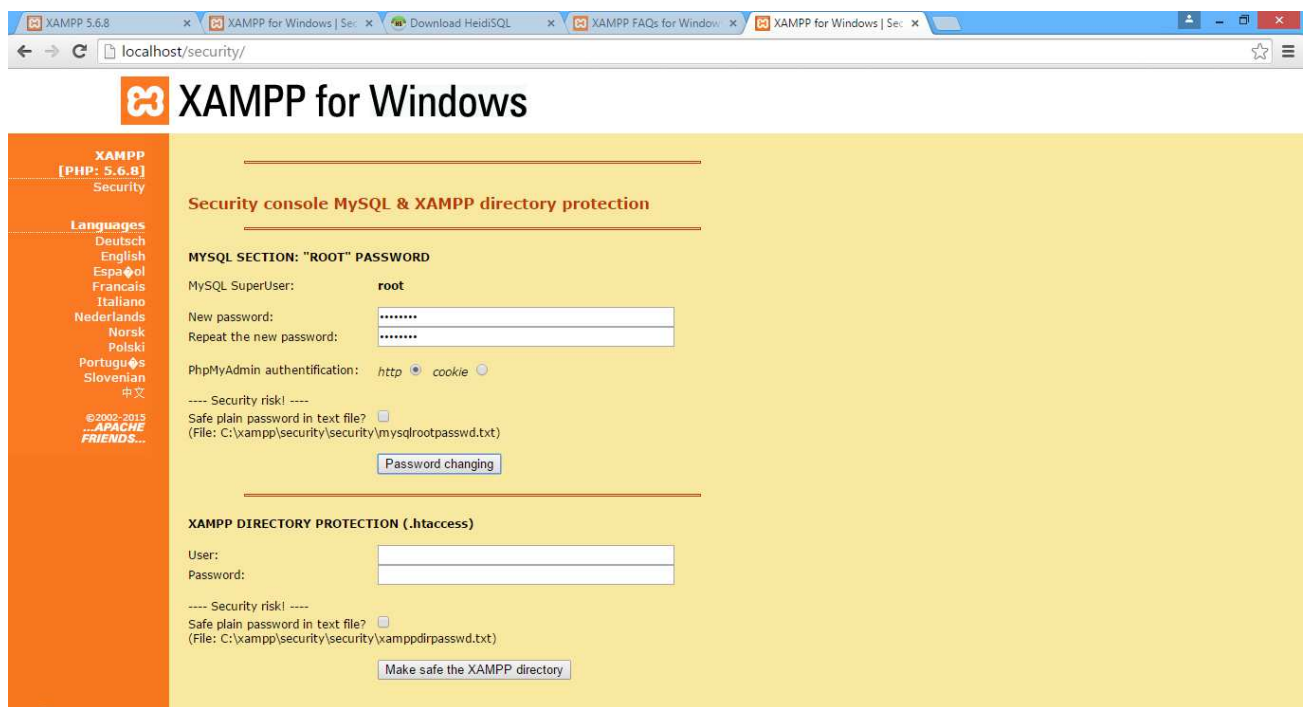

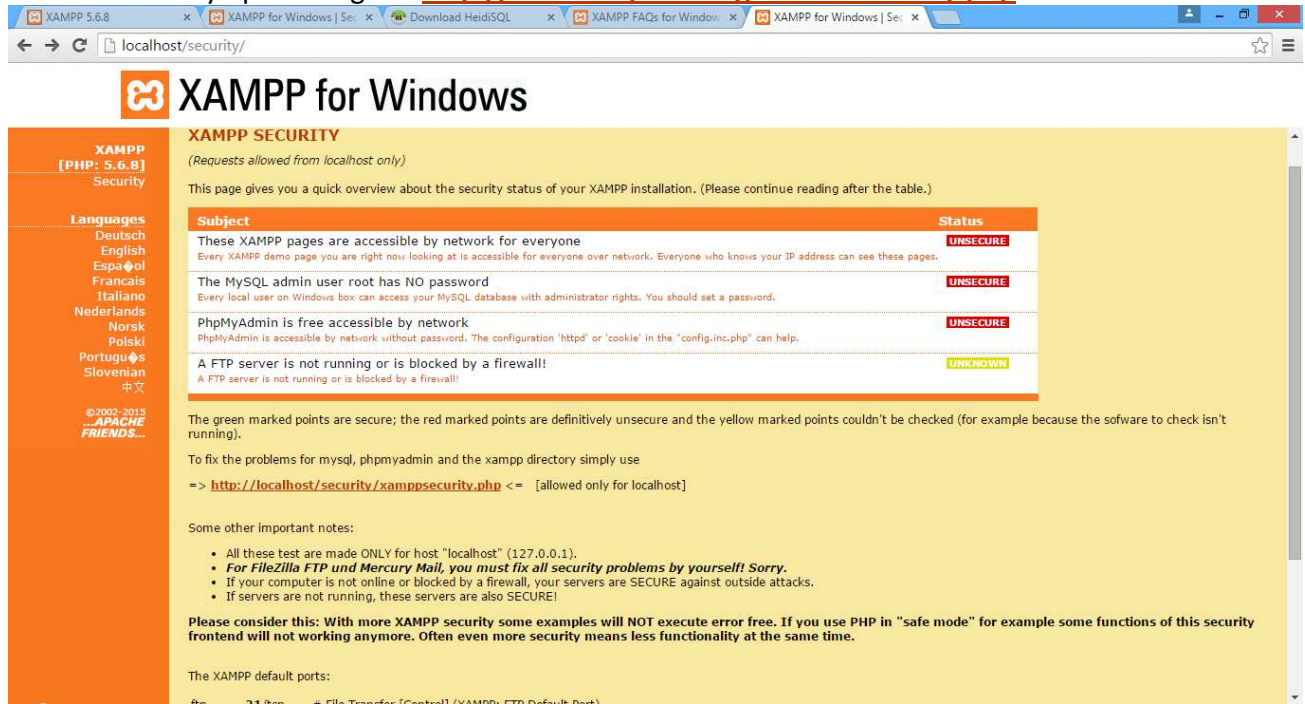

After installation, you will see XAMPP control panel. If not you can restart and find it in the program menu

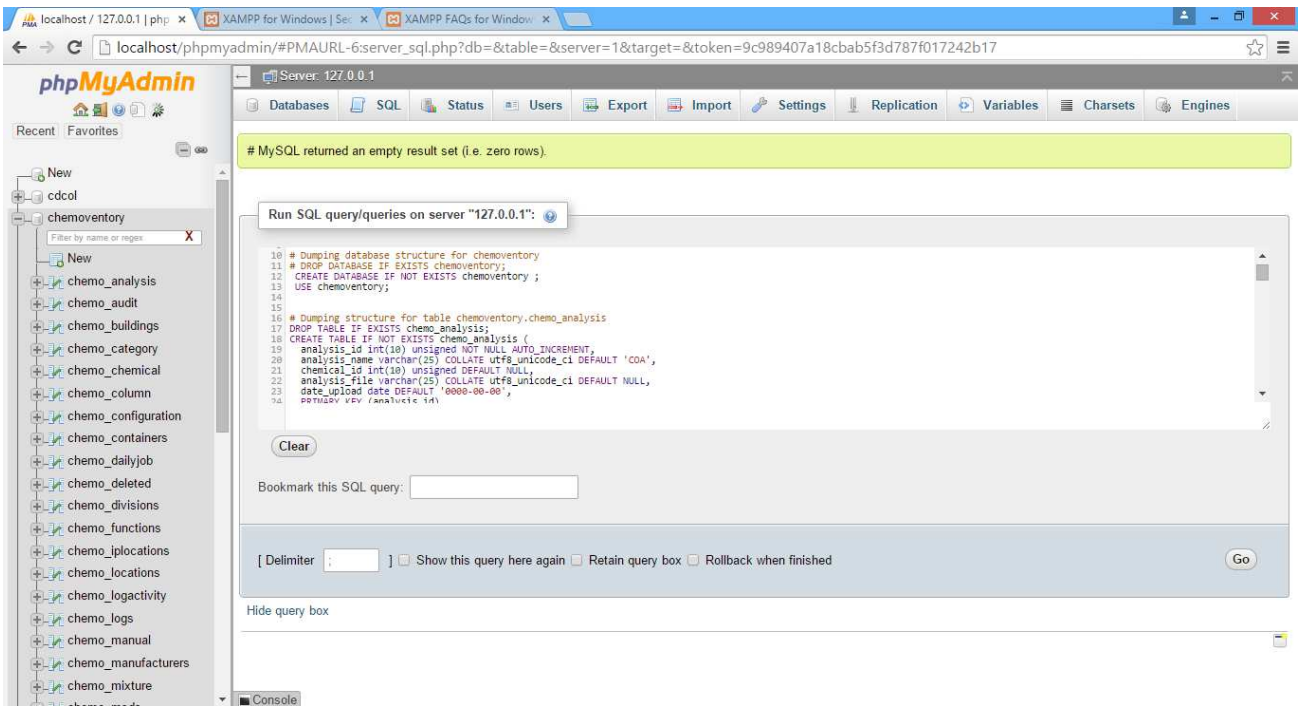

You can start the screen from start program.

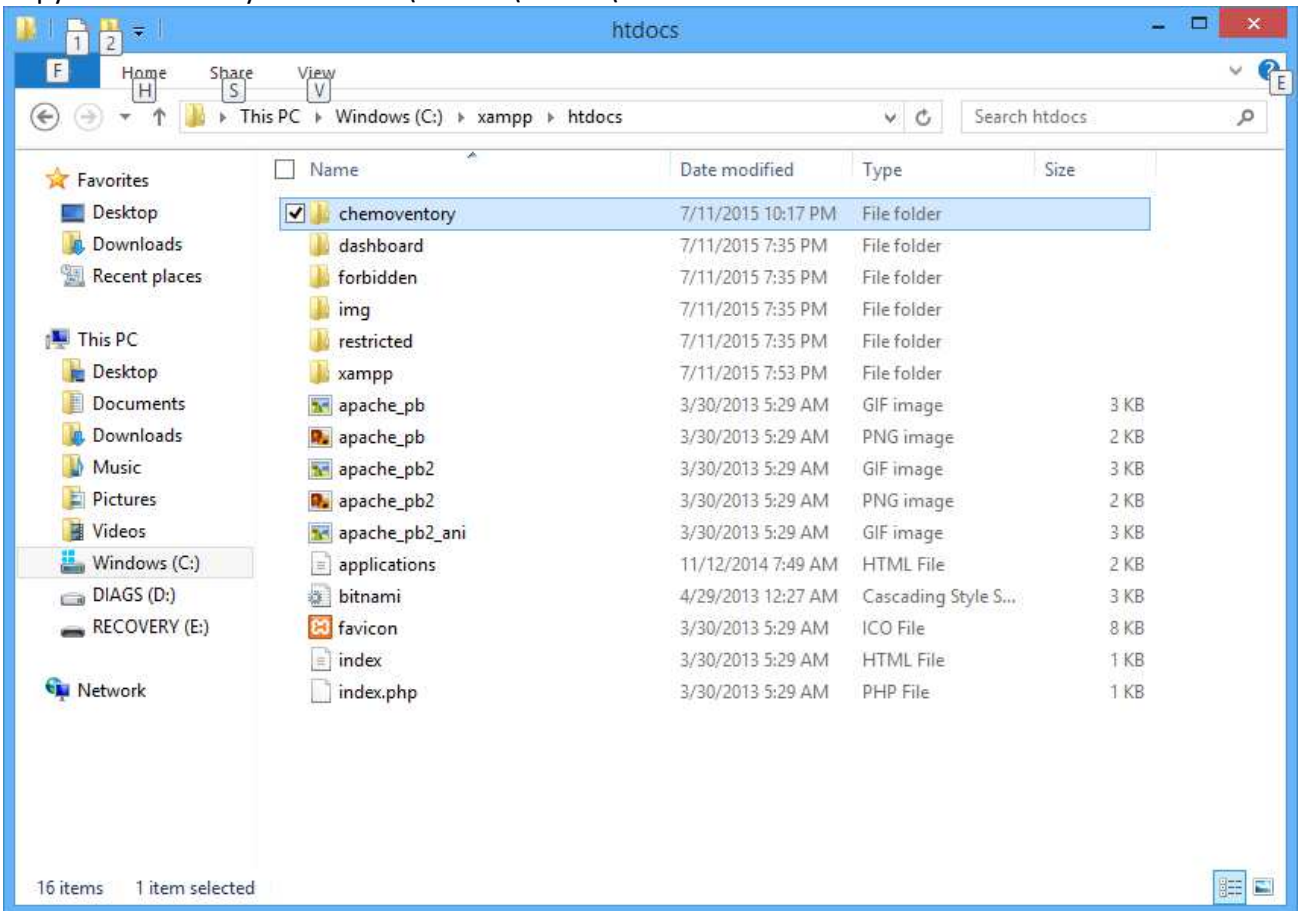

First thing you should do is secure by setting MySQL password and do the same other components. click the security option or go to <http://localhost/security/XAMPPsecurity.php>

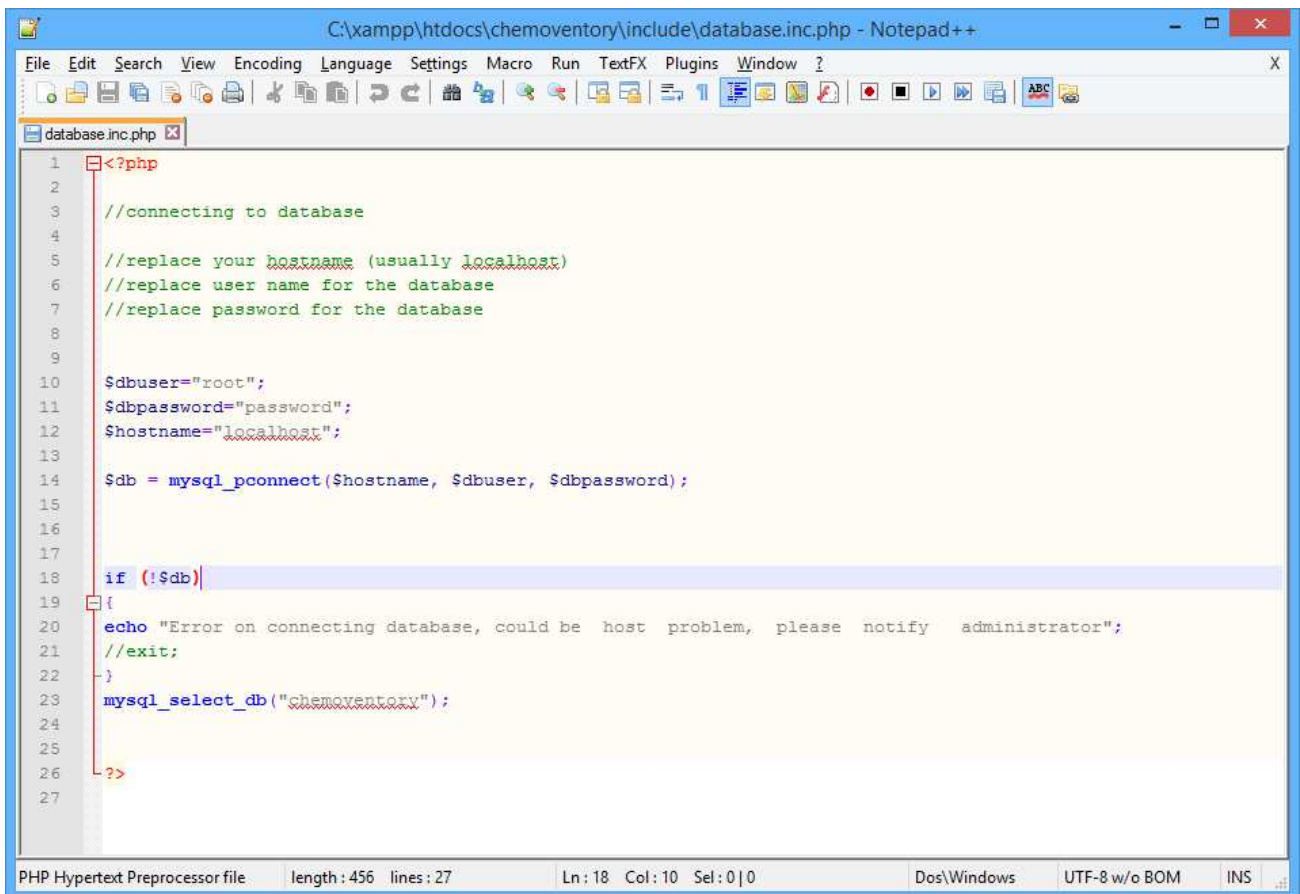

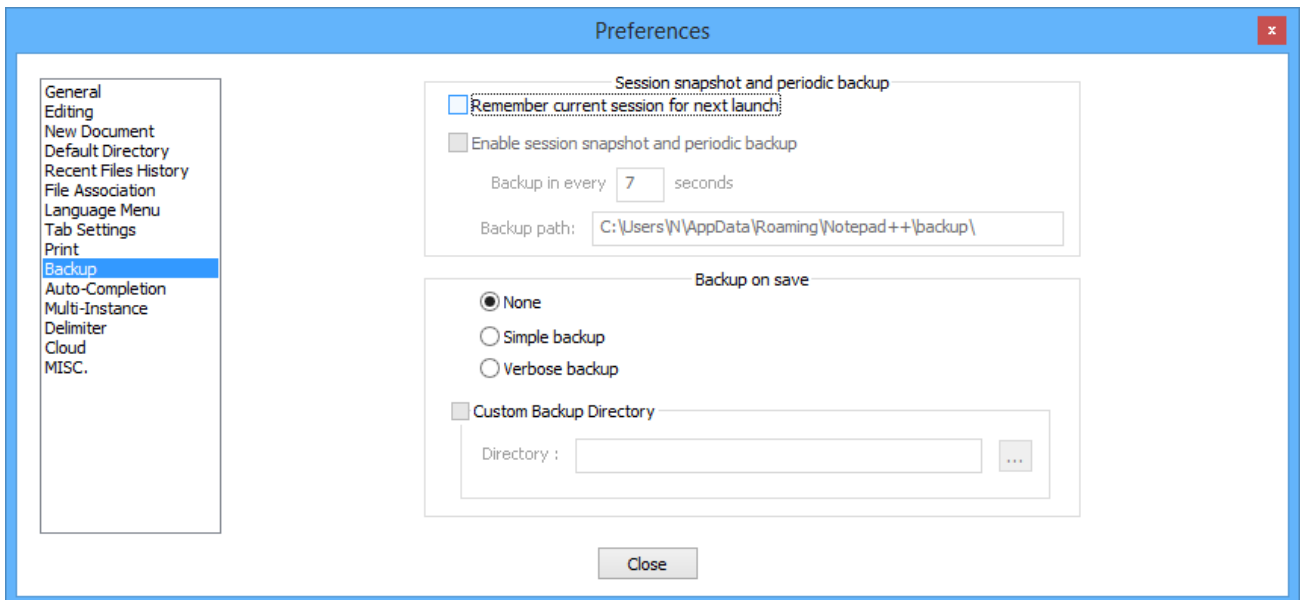

In the XAMPP control panel click mysql admin window or XAMPP web page click Tools PHPMySqlAdmin  
In SQL tab copy and place chemoventory.sql.

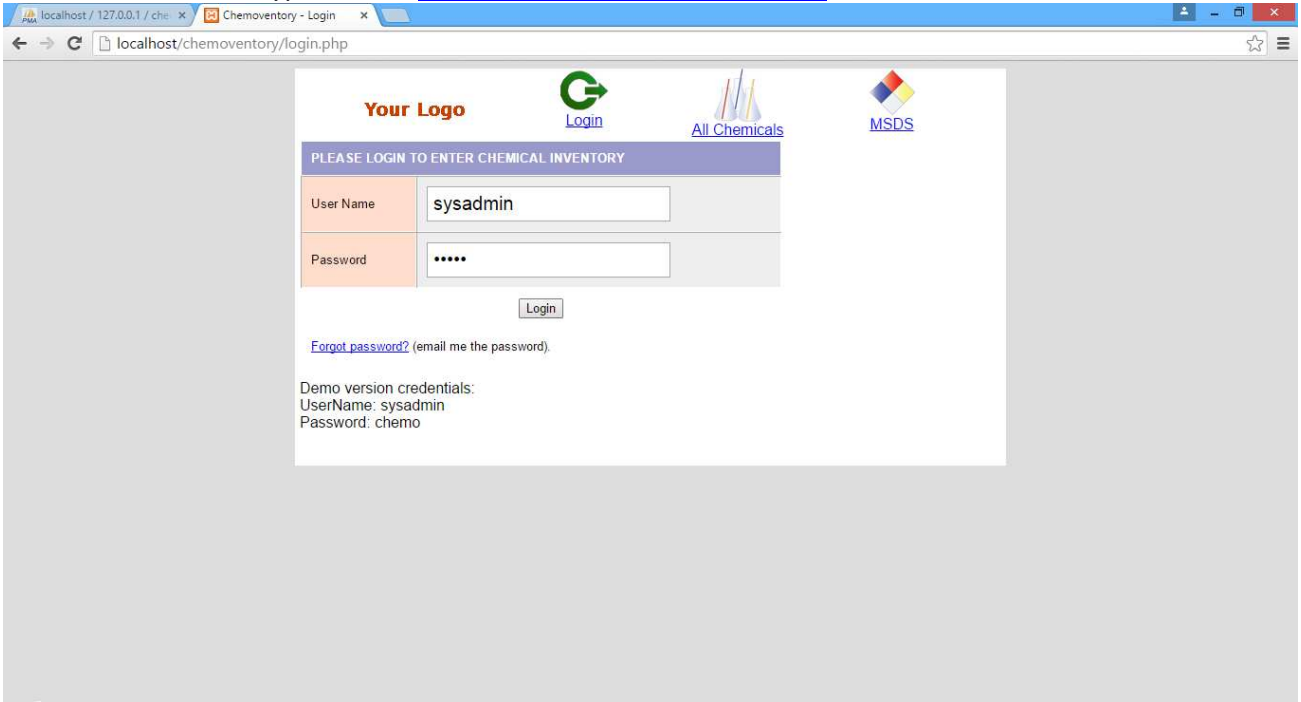

Copy chemoventory folder in C:\XAMPP\htdocs\

Edit the file database.inc.php using editor. My favorite editor is Notepad++. If you install Notepad++ do this configuration in settings and preference

Now in the browser type this url <http://localhost/chemoventory/>

The screenshot shows a web browser window with the address bar displaying `localhost/chemoventory/login.php`. The page content includes a header with navigation links: "Your Logo", "Login" (with a green circular arrow icon), "All Chemicals" (with a test tube icon), and "MSDS" (with a diamond icon). Below the header is a blue bar with the text "PLEASE LOGIN TO ENTER CHEMICAL INVENTORY". The main form has two input fields: "User Name" containing "sysadmin" and "Password" containing "\*\*\*\*\*". A "Login" button is positioned below the password field. At the bottom of the form, there is a link for "Forgot password? (email me the password)" and a section for "Demo version credentials:" listing "UserName: sysadmin" and "Password: chemo".
